

WATER BILLING

Waterbilling on module - 4 & 5 :

```
import java.util.Scanner;

public class WaterBill {

    static double calculateBill(int units) {
        double bill = 50;           // service charge
        if (units <= 10) {
            bill += units * 5;
        } else if (units <= 30) {
            bill += 10 * 5 + (units - 10) * 8;
        } else {
            bill += 10 * 5 + 20 * 8 + (units - 30) * 12;
        }
        return bill;
    }

    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("How many customers? ");
        int n = sc.nextInt();
        double total = 0;

        for (int i = 1; i <= n; i++) {
            System.out.print("Customer " + i + " name: ");
            String name = sc.next();
            System.out.print("Previous and current reading: ");
            int prev = sc.nextInt();
            int curr = sc.nextInt();

            if (curr < prev) {
                System.out.println("Invalid reading, skipped.");
                continue;
            }
            int units = curr - prev;
            double bill = calculateBill(units);
            total += bill;
            System.out.printf("%s used %d units -> Rs.%.2f%n", name, units, bill);
        }
        System.out.printf("Total billing: Rs.%.2f%n", total);
        sc.close();
    }
}
```

```
}  
}
```

OUTPUT:

```
Customer 1 name: jaswanth  
Previous and current reading: 120 145  
jaswanth used 25 units -> Rs.220.00  
Customer 2 name: maneesh  
Previous and current reading: 110 120  
maneesh used 10 units -> Rs.100.00  
Customer 3 name: honey  
Previous and current reading: 140 160  
honey used 20 units -> Rs.180.00
```
